

**SAFE AND EFFECTIVE MICROBIAL SOLUTIONS**

**OFFERING THE BREAKTHROUGH PROCESS IN RESIDENTIAL & COMMERCIAL MOLD PROTECTION USING THE PURESAPCE™ PROCESS**

**FAST**

An innovative process which allows for projects to be completed in days, not weeks or months.

**EFFECTIVE**

100% success rate on thousands of projects. All testing performed by third-party professionals.

**AFFORDABLE**

A breakthrough approach that benefits our clients with tremendous savings in time, disruption and money over alternative methods.

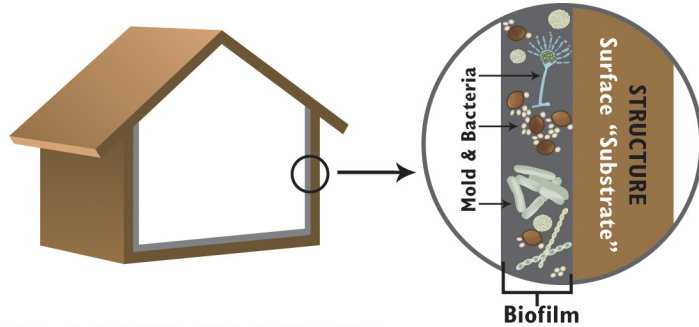

**GUARANTEED**

An industry first! Our industry leading performance warranty is backed by an AM Best A+ rated insurance carrier.

Very simply put, our two-step process first cleans contaminated surfaces and then leaves a microbial barrier for effective, safe and affordable long-term protection. The results clearly demonstrate the viability of this process and our thousands of satisfied customers and references validate its effectiveness.

- ⌋ Fast & Effective
- ⌋ Affordable & Fully Warrantied
- ⌋ New & Existing Construction
- ⌋ Preferred Choice of Professionals

PURESAPCE™ provides the most effective way to treat mold and bacteria contamination. The following simplified and highly magnified images depict the action behind this solution.

**GOING AFTER BIOFILMS**

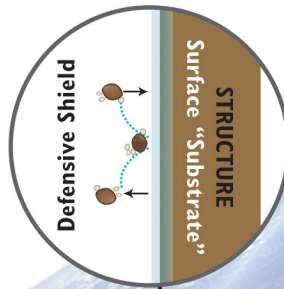

Mold and bacteria can attach themselves to biofilms within a building or space. Biofilms are essentially places where organisms can thrive. A biofilm community can include bacteria, fungi and other microorganisms. Organisms within the biofilm are generally difficult to reach and until now, extremely difficult to remove.

1) Remove Biofilm

**FIRST STEP: YOUR PROJECT IS PROPERLY PREPARED FOR SAFETY AND TO GUARANTEE EXCELLENT RESULTS.**

The PURESAPCE™ product is applied to remove the biofilm with all its occupants and nutrients, leaving a hygienic surface. This cleaner is highly effective, completely safe and dries within minutes of application.

2) Microbial Shield

**SECOND STEP: CLEANED SURFACES ARE TREATED FOR LONG TERM PROTECTION.**

One of the two specifically designed shields (one for finished surfaces and one for construction materials) is applied immediately following the first step. These shields provide future protection against mold and bacteria growth. Long-term warranties are offered when the entire space is treated by our certified applicators and upon the receipt of acceptable air clearance tests from 3rd party professionals engaged by our clients.
